Characteristics indicated on this data sheet are those that can be achieved with the highest performance cable. Intrinsic limitations of the cable may diminish the performance of the assembly

**COMPONENTS**

**STRIPPING CABLES**

We recommend a thermal preconditioning cable

1

Strip the dielectric of the cable .  
 Clean the cable .  
 Soldering 180°C  
 Temperature stoking do not exceeded 250°C

2

Screw the positioner onto the soldering jig.  
 Slide the center contact onto the cable inner conductor  
 against insulator.  
 Fit the cable assembly onto the soldering jig.  
 Insert the soldering gauge  
 Tighten.  
 Take off the soldering gauge.  
 and solder the contact.

3

After cooling remove cable assembly from the jig.  
 Insert cable+centre contact in the connector.  
 Slide the positioner in the connector interface.  
 Slide cable into the connector body until it bottoms  
 against.  
 Slide positioner into the assembly.  
 Tighten.  
 Solder the body onto the cable.  
 After cooling remove cable assembly from the jig.
